

# Instruction for Finding Scope ID and Serial Number

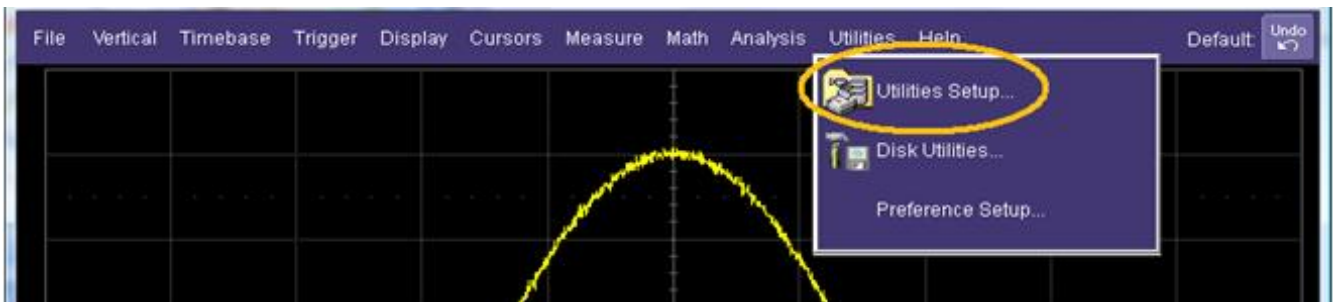

Roland Gamper, Lahniss

## Context

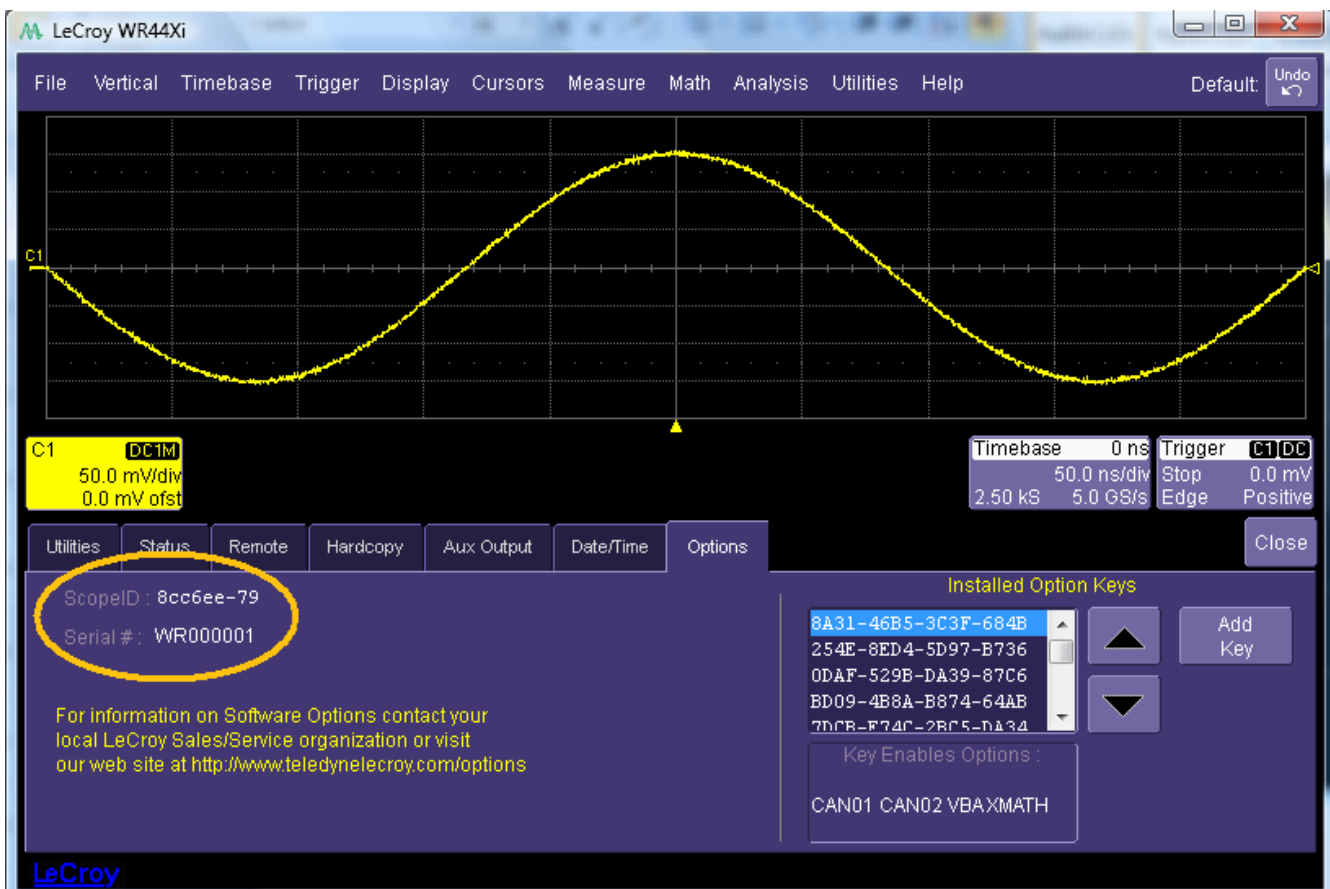

This document explains how to locate the Scope ID and Serial Number on a LeCroy oscilloscope. The Scope ID is necessary to issue Option Keys in general and Decode Options in particular.

## Navigating to the Option Tab

Choose the pull down menu "Utility", and then select "Utility Setup"

Then select the "Options" Tab.

## Copying the Scope ID and Serial Number

The Scope ID and Serial Number can be cut and paste as a small bitmap and then sent by e-mail:

```
ScopeID : 8cc6ee-79  
Serial# : WR000001
```

This method avoids transcription errors.

## Reading out Scope ID and Serial Number via xStreamBrowser or remote commands.

Both the Scope ID and the Serial Number can be queried via remote commands using the syntax:

- `app.Utility.Options.ScopeID`
- `app.Utility.Options.SerialNum`

These commands will return texts that can also be pasted directly into e-mails, therefore minimizing the risk of errors.
